BIO

I'm Felicien, a final year Ph.D. candidate in the Department of Information Engineering, Computer Science, and Mathematics (DISIM) at the University of L'Aquila/Italy. I'm part of Intecs Solutions S.p.A's Research and Development team under the Innovation Technology Service lab (Pisa-Italy). I have a Master's degree in Electrical and Computer Engineering from Carnegie Mellon University. Despite my interest and working experience as a Software Engineer, I'm working on research areas of Model-based software engineering (MBSE), Low-code Engineering (LCE), and the Internet of Things (IoT) at the Edge/Fog/Cloud. Low-code software engineering approaches integrates the theoretical and technical research in low-code software development platforms, MBSE, cloud computing, and machine learning to automate the development of more advanced software in the domains such as system engineering, IoT and cyber-physical systems. My current work focuses on developing a robust domain-specific environment for the development, analysis and deployment of engineering IoT systems by employing low-code software engineering principles.
